Lambdatherm ® --- Expanded Polystyrene

We are pleased to announce that as from March 2014, Lambdatherm ® products will be manufactured with the new polymeric flame retardant.

With this switch, we will satisfy the statutory requirements ahead of August 2015 which will be enforced.

HBCD will no longer be allowed as a flame retardant within the EU as a result of the REACH legislation.

The Characteristics of the bead for the finished boards will obtain the same values of thermal, compression and cross break etc.

We have been running numerous trials with this new flame retardant in conjunction with BASF over the last months.

We will also be looking to change the white expanded polystyrene over to the new flame retardant well within the REACH Legislation,

We feel that this is a proactive move well within the European time scale allowing to help promote Lambdatherm ® into the expanded polystyrene market.

Yours Sincerely

D. Smith
